#### **Re-Architect Our Intranet**

Project Title	Re-Architect Our Intranet
	Help the internal website for the Material Measurement Lab at NIST be more user friendly. It has grown organically over the years, and now it needs a proper architect-ing with consideration for why people visit it, what they are looking for, and if they are finding it.
Country	United States

## **Project Description**

Our intranet is the place for nearly 1,000 employees to get the information they need to do their jobs, learn more about their colleagues and their work, and learn about policies, events, deadlines, and awards. The intranet has grown organically over the years and now it needs someone to take some gardening sheers to it and organize it logically. The platform is Drupal 8. We expect that our intern will have knowledge of web usability and architecture (or a willingness to learn very quickly); the ability to recommend changes based on user feedback, analytics, and other best practices; and proficiency at communicating those changes using wire frames or a similar tool.

### **Required Skills or Interests**

Skill(s)
Website design

#### **Additional Information**

You can't access our intranet because it's behind a firewall, but you can Learn more about NIST at https://youtu.be/2j9BGVKbzS4 and https://www.nist.gov/Learn more about the NIST Material Measurement Lab at https://www.nist.gov/mml

# **Language Requirements**

None
